

I am very enthusiastic about Entrepreneurship because I am determined to become successful in an ever evolving and innovative business economy. I also desire to make strong connections with like minded, high level professionals that have similar career ambitions and goals as I do; as well as make a strong long term positive impact in my community and worldwide. I'm interested in this program specifically because it is reputedly one of the highest level and most prestigious MBA programs in the State of Michigan, and it also happens to be located in my backyard and in a pro-business city that I am quite fond of.

This program will help further improve my leadership skills, business acumen, and also build a base for me to expand my network and continue to grow my insurance agency. My future career aspirations are to continue to scale my insurance agency to \$250,000 in annualized premium (revenue)/month and become a partner within my firm within 3-5 years. I also want to continue to personally invest and own/grow a large and diversified portfolio of businesses in the financial services industry, e-commerce sector, cryptocurrency, and other innovative technologies/causes; as well as eventually scale a successful real estate rental portfolio/fund, that I plan on involving a high level investor base. I also have big charitable goals in order to give back to my family and community in a positive & impactful way. In addition, I also want to create an online business mastermind/entrepreneurial community for successful young professionals who are likewise interested in creating financial freedom and success for themselves and their families. Our main mission would be to come together to grow into successful young businessmen and women by modeling and executing on different businesses with each other and as a side effect, have a positive impact on our local communities.

I went to Clarkston High School where I was a member of CSMTech; which is a Science, Math, and Technology program for rigorous students who are interested in discovering more about technology, and solving strategic programs. I also took many business/marketing classes and followed an advanced placement curriculum. Thereafter, I received a bachelor's degree in Business Administration with a minor in marketing from Aquinas College in Grand Rapids MI, where I graduated with a 3.4 cumulative GPA. I also competed in an entrepreneurial product program in Grand Rapids MI, and won 2 years in a row. I have also received several certifications for the successful completion of digital marketing/advertising programs, mortgage knowledge and real estate investing courses, as well as comprehensive insurance knowledge. In addition, I am a Corporal reservist in the United State Marine Corp; so I am highly proficient in advanced combat knowledge, war tactics, and I also have a broad knowledge of U.S. military history. Overall, my academic history extends beyond the classroom: I have studied expert mentors in their respective field(s); and have also learned through 3+ years of business/relative work experience, post college. I also have an extensive collection of non-fiction business/entrepreneurial books that I enjoy reading in my free time.
